FEATURES

- **HORIZONTAL RESOLUTION 1000 TV LINS**

Sencor :1/3" Progressive Scan CMOS / Min,Illumination : 1 Lux at 1.2 / 0.1 Lux (B/W)

- **DAY & NIGHT FUNCTION**

This camera has a function that automa-tically selects the mode that is appropriate for daytime or night-time conditions. The COLOR mode operates in daytime conditions to provide optimum colors, and BW mode operates in nighttime conditions to enhance the definition of the image.

- **3DDNR (3D DIGITAL NOISE REDUCTION)**

By using the DNR chip, the amount of low illuminance noise has been significantly reduced, and the signal-to-noise ratio (S/N ratio) as well as horizontal resolution have been improved, resulting in a clear and sharp image display even in the dark.

- **WDR (WIDE DYNAMIC RANGE)**

By adopting a proprietary 1/3" Progressive Scan CMOS chip, the camera delivers clear, high quality pictures even in backlight, by increasing exposure in dark areas while decreasing it in bright areas; a corrected image with clear details results.

- **PRIVACY FUNCTION**

The PRIVACY function enables you to select and record only choosen area among twenty-eight areas.

- **ADDITIONAL FUNCTION**

WHITE BAL, MOTION DETECTION, MIRROR, SHARPNESS, FREEZE, DZOOM, SHADING, HLM, ACE Function are also available.

- **CONTROLLED OSD MENU**

The camera can be controlled by selecting text displayed on the monitor screen.

PRECAUTIONS

Do not disassemble the camera.

There are no user-serviceable parts inside it.

Do not install the camera in extreme temperature conditions.

Do not use the camera under conditions where temperatures exceed -10°C to 50°C. Especially be careful for ventilation under high temperature.

Do not install or use the camera in an environment where the humidity is high.

It can cause the image quality to be poor.

Do not install the camera under unstable lighting conditions.

Severe lighting change or flicker can cause the camera to work improperly. It can cause malfunctions to occur.

Do not touch the front glass of the camera.

It is one of the most important parts of camera. Be careful it is not smudged by fingerprint.

Never keep the camera face to strong light directly.

It can damage the CCD.

Do not drop the camera or subject it to shaking.

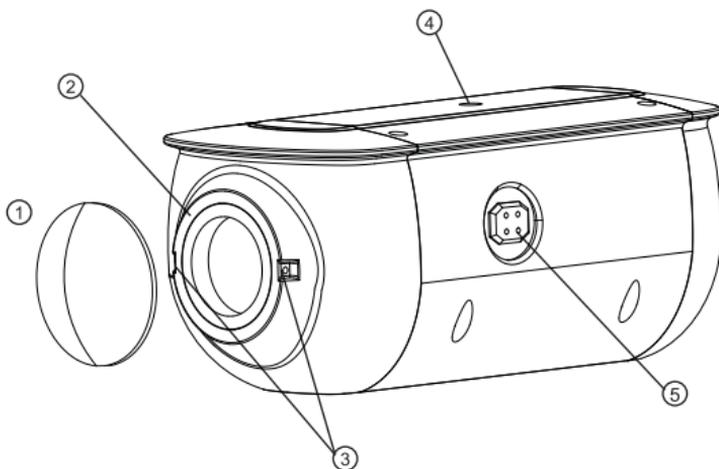

It can cause malfunctions to occur.

Note

- If the camera is exposed to spotlight or an object reflecting the strong light, smear or blooming may occur.
- Please check whether the power satisfies the normal specifications before connecting the camera.

PART & FUNCTION

FRONT

① Protective Lens Cap

② CS-Mount Lens Adapter

③ BACK FOCUS Lock Screws

These are two screws used to adjust the back focus of the camera which is normally set on factory default. These must be loosened (using an L-wrench) before the camera can be focused.

After readjusting, lock the screws into place.

④ Tripod Mounting Holes

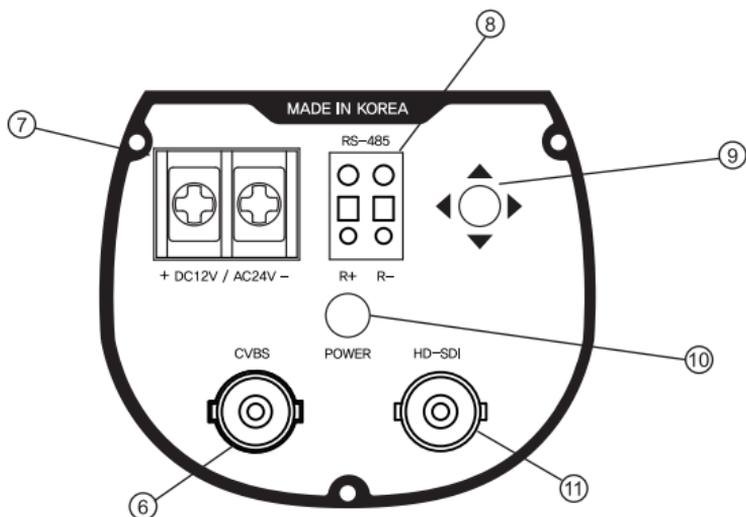

You can attach a mount to the camera from either the top or the bottom.

⑤ Auto Iris Lens Connector

When you use Auto Iris Lens, connect the lens plug to auto iris connector located on the side of the camera.

PART & FUNCTION

BACK

- ⑥ CVBS : It is a video analog BNC connector.
- ⑦ Power Input Terminal
Connects to the power source. Please refer to page 9.
- ⑧ RS-485: This is the communication port to do the remote control OSD menu.
- ⑨ Function Switch Please refer to page 12.
- ⑩ Power Lamp
The power lamp turns on when connected to a power source.
- ⑪ HD-SDI : It is HD-SDI video signal output BNC connector.

CONNECTION

Please refer to the manual when connecting various instruments.

LENS

This camera is not supplied with a lens. Please purchase a lens that fits your needs.

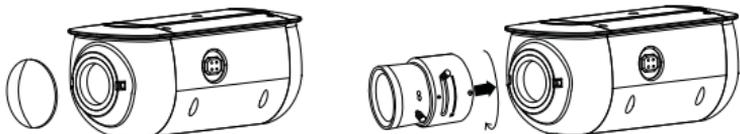

Notes : - If the lens has fingerprints or other objects on the lens the image quality might be affected.

- A higher quality lens provides a better picture.

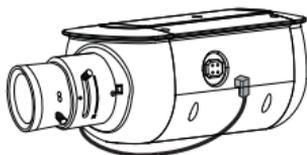

- ▶ Adjust the focus if the camera is out of focus for changing between daytime mode and nighttime mode.

1. Installing Auto Iris Lens

- ① Remove the protective cap and attach the lens into the camera by turning it in a clockwise direction.

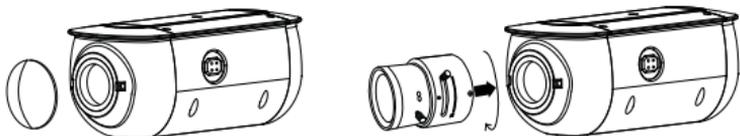

- ② Connect the lens plug to the auto iris connector on the side of the camera.

2. Installing a CS-mount Lens

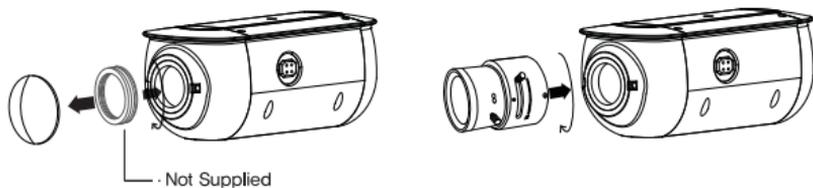

Remove the protective cover and connect the lens into the camera by turning it in a clockwise direction.

CONNECTION

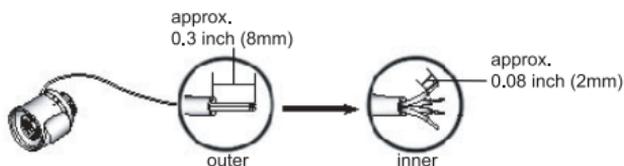

3. Installing a C-mount Lens

- ① Remove the protective cap and connect the c-mount adapter turning it in a clockwise direction.
- ② Connect the lens into the camera by turning it in a clockwise direction.

► How to make IRIS plug connector

Remove the insulation from the outer and inner lens cables as shown in the drawing.

Remove the cover of the auto iris plug connector (supplied with the camera) and solder the lens cable to the pins as shown in the following configuration.

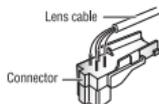

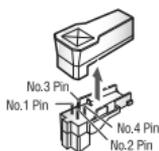

DC type

No.1 Pin Damping -

No.2 Pin Damping +

No.3 Pin Drive +

No.4 Pin Drive -

CONNECTION

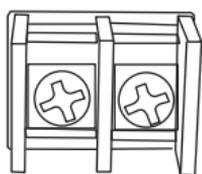

CONNECTING POWER

Different models have different power specifications, so please check that you have the correct power source before making the connection.

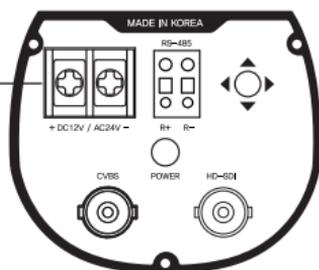

1. AC/DC Dual Power

The camera has a common power input connector for both 12V DC and 24V AC. The unit has a wide power tolerance, within DC $12V \pm 10\%$ or within AC $24V \pm 10\%$.

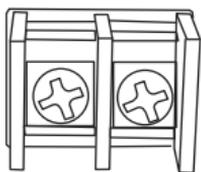

* The Power input is non polarized.

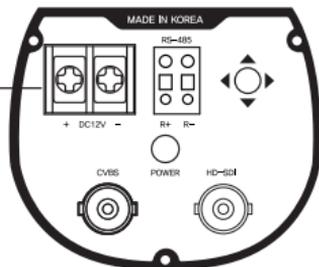

AC24V / DC12V

2. DC Power

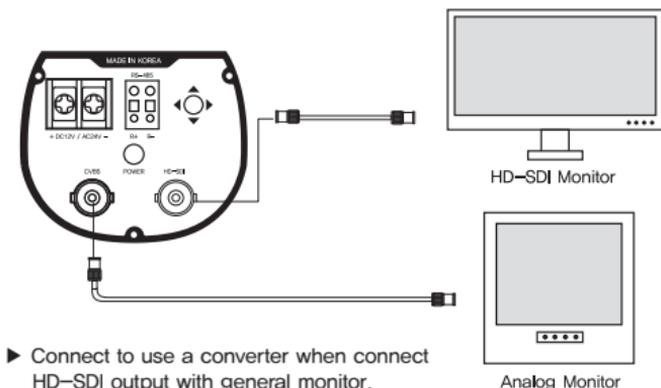

AC24V / DC12V

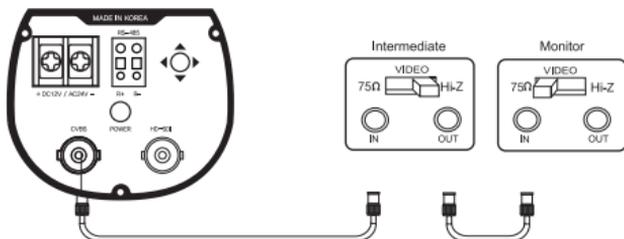

CONNECTION

CONNECTING THE CAMERA TO THE MONITOR

1. Connect the VIDEO out jack from the camera to the video in jack on the monitor.
Be sure the power is turned off before connecting the cable.

2. If using an intermediary device (DVR, VCR, etc.) between the camera and the monitor, please set it at Hi-Z and leave the monitor at 75Ω.

▶ Video cable.

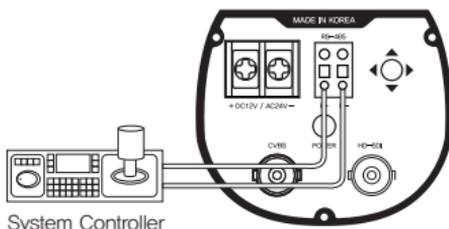

The cable to connect a video output of the camera and the monitor is BNC coaxial cable same as the below. If the install distance between a camera and the monitor is over the max video transmission range, please use the separated video amplifier.

Max video transmission range	Recommended cable specification
100 ~140m	5C2V (75ohm)
200m	L-6CHD (75ohm) (SDI exclusive cable)

CONNECTION

CONNECTING TO RS-485 CONTROL CABLE

Using a RS-485 communication, it will be able to control the OSD menu at the System Controller or DVR.

- (1) The case which it controls from the PC
Using a RS-485 converter, It connects to RS-485 control cable outside camera and serial cable
EX) SERIAL PORT OF THE PC(COM1) → SERIAL CABLE → RS-485 CONVERTER
→ RS-485 CONTROL CABLE
- (2) The case which it controls from the DVR or System Controller
It connects the RS-485 control cable in the connection terminal of 485 control boards which are connected with the DVR or System Controller.

485 Control Board Connection Port	RS-485 Control Port
(+) CONNECTION TERMINAL (R+)	485+
(-) CONNECTION TERMINAL (R-)	485-

▶ RS-485 Communication establishment initial value

Item	Camera ID	BAUD RATE	UART MODE	RET PKT
Initial value	0	9600	8-NONE-1	Not supported

NOTES

- When you construct external control systems for a camera control, please use to the PROTOCOL or PELCO-D PROTOCOL.
- When you connecting to RS-485 control cable, please peel off the outer skin inside the RS-485 control cable.

CAMERA OPERATIONS

SETTINGS

Settings can be made using the 5 buttons located on the back of the camera.

Note

- 'MANUAL' menu for fixed lens models, 'DC' menu for auto iris models.
- Box type camera have both Lens menu.

1. Please press the SET button

- Settings can now be made. The SET menu is displayed on the monitor.

2. Please select any function you wish to activate by pushing the button Up or Down

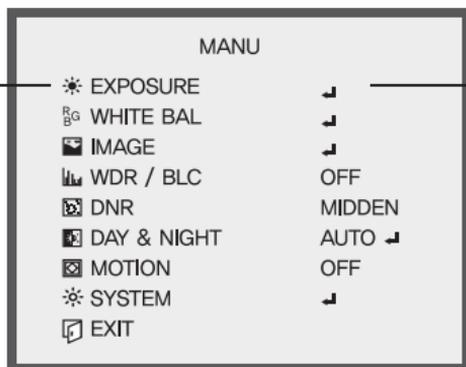

- The cursor position will appear green on your screen.

You can push the button Up or Down to change function you wish to change.

CAMERA OPERATIONS

MANU

Select any function you wish to operate by pushing the button Up or Down.

Modes can be changed pushing the button Right or Left.

3. Please press the button Right or Left if you wish to change mode.
 - When the button is pressed Right or Left, available values and mode are displayed in order. Please keep press the button until you get the mode you wish.
4. Please select "EXIT" and then press the button to finish the setting.

SETUP

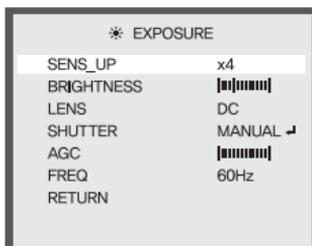

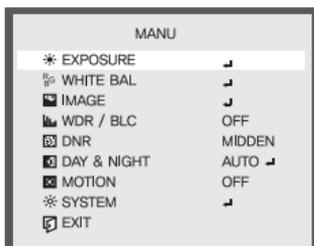

EXPOSURE, WHITE BAL, IMAGE, WDR / BLC, DNR, DAY&NIGHT, MOTTION, SYSTEM, EXIT control can be selected.

- When the MAIN MENU is on the screen, please position the cursor to SETUP by using the button, And then press the button,

CAMERA OPERATIONS

☼ EXPOSURE

- When the SETUP menu screen is displayed, select EXPOSURE by using the Up and Down buttons so that arrow indicates EXPOSURE.
- Select a desired mode using the Up and Down buttons.

– SENS_UP : OFF / x2 / x3 / x4

- Sens-up is realized in the most low illumination quality and it provides the image without a noise at the low illumination quality.
- When it is night or dark, the camera automatically detects the light level and maintains a clear picture if this mode is activated.
- When “SENS_UP” is on, shutter cannot be adjusted.

– BRIGHTNESS : Left Key (Level DECREMENT), Right Key (Level INCREMENT)

– LENS : When using BUILT-IN LENS, the type of the lens is able to fix,
(DC / MANUAL)

– SHUTTER :

- You can select either auto or manual shutter,
(1/30, 1/60, 1/120, 1/240, 1/500, 1/1000, 1/2000, 1/4000, 1/8000, 1/16000,
1/30000, 1/60000)
- Shutter is set to “Manual” when DC Lens is selected
- Shutter is set to “Auto” when Manual Lens is selected

– AGC (Auto Gain Control)

- The higher the gain level, the brighter the screen - but the higher the noise.

– FREQ (AC Power Frequency Set)

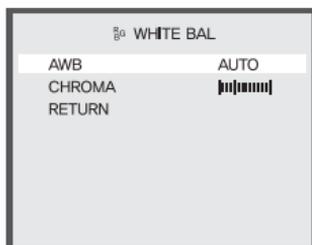

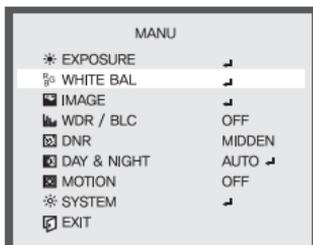

- You can select either 50Hz or 60Hz
- Do the setting of the frequency of the commercial power in a camera and prevent Flicker state.

– RETURN

CAMERA OPERATIONS

WHITE BAL

- Use the White Balance function to adjust the screen color.
- When the SETUP menu screen is displayed, select 'White Bal.' by using the Up and Down buttons so that the arrow indicates 'White Bal.'.
- Select a desired mode using the Up and Down buttons.

Select one of the following 2 modes, as appropriate for your purpose.

- AWB
 - AUTO : Default - This function continuously adjusts the white balance automatically to adapt to changes in lighting conditions.
 - PUSHING : This function adjusts the white balance regardless of the subject conditions.
 - MANUAL : User preset
 - KELVIN : LOW / MIDDLE / HIGH
 - R-GAIN : Left Key (Level DECREMENT), Right Key (Level INCREMENT)
 - B-GAIN : Left Key (Level DECREMENT), Right Key (Level INCREMENT)
 - RETURN
- CHROMA : Left Key (Level DECREMENT), Right Key (Level INCREMENT)
- RETURN

NOTE

- Under the following conditions the WHITE BALANCE function may not operate properly. In such cases, please select the AWB mode.
 - 1 When the object's surroundings have a very high color temperature (eg, a clear sky and sunset)
 - 2 When the object's surroundings are dark
 - 3 If the camera directly faces a fluorescent light or is installed in a place where there are considerable changes in illumination, the WHITE BALANCE function may become unstable.

ACE black performs an image Enhancement processing to enhance visibility of an image by changing the brightness values to the level that people can recognise the change.

This processing technique is equivalent to the dynamic range reduction technique, Which converts the HDR (High Dynamic Range) into the restricted LDR (Low Dynamic Range)

– RETURN

CAMERA OPERATIONS

WDR / BLC

- OFF : function does not operate.

- WDR (Wide Dynamic Range)

Realize the improved backlight compensation function more than existed WDR (Wide Dynamic Range) with a fusion ratio of the optimum by pixel, when they composite both a shutter of high speed at the light area and the shutter of low speed at the dark area.

- WDR_WGT : The available range of level is 0 ~ 4
- RETURN

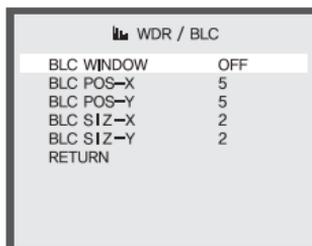

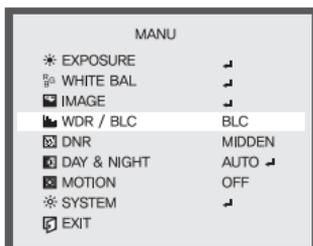

WDR (ON)

WDR (OFF)

- BLC (Backlight Compensation)

When there is a strong backlight behind the object, clear images of the background as well as the object can still be obtained by using the BLC function.

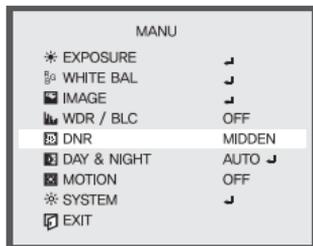

- BLC WINDOW : You can choice ON or OFF
- BLC POS-X : The available range of level is 0 ~ 20
- BLC POS-Y : The available range of level is 0 ~ 20
- BLC SIZ-X : The available range of level is 0 ~ 20
- BLC SIZ-Y : The available range of level is 0 ~ 20
- RETURN

CAMERA OPERATIONS

DNR

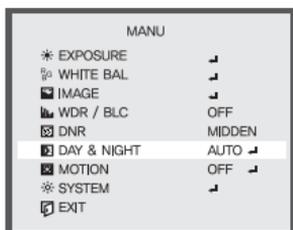

DNR (Digital Noise Reduction)

- Improve S/N ratio and more clean the low illumination quality and can be monitoring at night clearly without the image drag and noise phenomenon.

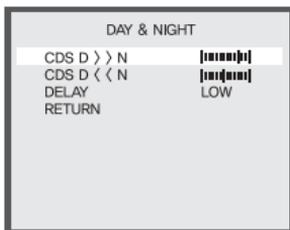

- OFF : DNR function does not operate.
- LOW / MIDDLE / HIGH : You can select 'LOW', 'MIDDEN' or 'HIGH' menu as DNR condition.

DAY&NIGHT

< AUTO >

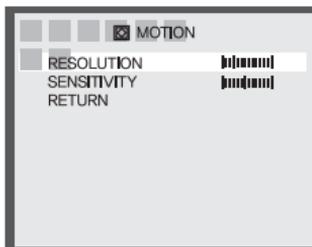

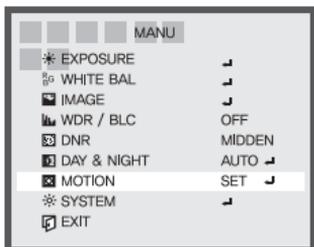

< EXTERN >

- **AUTO** : The camera will automatically show color image in high lux and black / white image in low lux.
- **COLOR** : This picture is always displayed in color.
- **B&W** : The picture is always displayed in black and white.
You can turn on or off the burst signal on B/W mode.
- **EXTERN** : Select this when the color is controlled by CDS sensor.
 - ▶ May not work for some models

CAMERA OPERATIONS

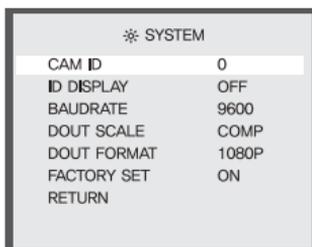

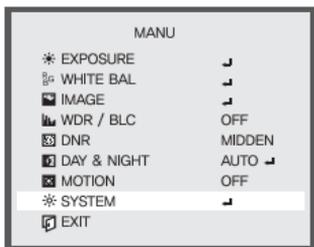

MOTION

This product has a feature that allows you to observe movement of objects in 3 different areas on the screen, and the words 'MOTION' appear on the screen when movement is detected. you can monitor activity more efficient.

- OFF : MOTION mode is cancelled.
- SET : Any motion in the selected areas is observed.
 - Please select the area you wish to observe from the areas in SELECT mode.
 - Please select ON mode for the chosen area.
 - Please adjust the level of observation by using MOTION mode.
 - Please press the RETURN to save the changes and complete the setting.

SYSTEM

- CAM ID : You can select camera ID from 0 to 254 when using remote control.
- ID DISPLAY : You can select ID ON or OFF
- BAUDRATE : You can select 2400 / 4800 / 9600 / 19200/ 57600 / 115200 bps.
Support "pe-D protocol"
- DOUT SCALE : - FULL : Full Image out
- COMP : Compress Image out
- DOUT FORMAT : You can select (1080P / 720P)
- FACTORY SET : Factory initialize
- RETURN

TROUBLE SHOOTINGS

If there are problems in operation, please refer to the items below. If the problem persists, please contact the agent you purchased this product from.

Nothing appears on the screen.

- Please check the power connection.
- Please check the video signal line connection.
- Please check and make sure that the auto lens switch is set to DC (VIDEO) when using a VIDEO(DC) lens.

The video image is not clear.

- Please check if the lens is clean.
Please clean the lens with a clean cloth or brush.
- Please adjust the contrast feature of the monitor.
- Please make sure that the screen is not exposed directly to a bright light.
Please move the camera if necessary.
- Please readjust the back focus of the camera.

The screen is dark.

- Please adjust the contrast feature of the monitor.
- If you have an intermediate device, set the 75Ω/Hi-z properly, and check the terminals.
- Please check if an auto iris lens is being used and adjust the brightness level.

TROUBLE SHOOTINGS

The MOTION DETECTION function is not working.

- Please check if 'MOTION DETECTION' mode is turned on.
- Please check if the MD LEVEL is too low.
- Please check the setting of the MD AREA.

Colors are not quite right.

- Please check the 'WHITE BAL' setting.

The screen is flickering.

- Please check if the camera is facing directly into sunlight or fluorescent light.
- Please check if an auto iris lens is being used.
- Please check the connection of the lens connector cable.

COLOR mode is not working.

- Please check if the AGC menu is set to the OFF position.

There is a problem with the camera operation. The camera surface is too hot and black stripes appear on the screen.

- Please check if an appropriate power source to the camera complies with the manufacturer's standard requirement, or if the voltage keeps changing.
