

Physical Installation

Tips to ensure your success when executing wireless installations

- Mount the equipment at least 15 feet above any obstruction including the ground.
- Mount the transmitter and receiver at the edge of the roof and ensure it is looking away from the building

Top Ten Installation Errors

10. Camera
9. Too much power
8. Application Hackers
7. Interference from other wireless devices
6. Power Source Ground Loop
5. Improperly terminated video cable or low impedance
4. Improper Line-of-Sight or alignment
3. Sharing Power Supplies between devices
2. Not compensating for lengthy power cables
1. Incorrect voltages to devices (too high or too low)
